

Reflexion Total Control: Email Security Products That Put You in the Driver's Seat

WRIS is now an authorized Reflexion Total Control Product Partner.
Ladies, gentlemen, email servers... start your engines.

WRIS Web Services is now an authorized reseller of Reflexion Total Control (RTC) Email Security products. This means we are no longer a Postini reseller as Google is in the process of discontinuing the ISP version of this service.

We cracked open our spiral notebooks, got out our highlighters, and took the time to do the anti spam research for you. And now, we are excited to offer a hosted email (anti-spam) security service solution to prevent spam and alleviate all your email aches and pains.

Reflexion Total Control is a hosted email security service that provides email users with unprecedented control over access to their inbox. Of course, Reflexion blocks unwanted mail, such as spam, viruses and directory harvesting and denial of service (DoS) attacks, and makes phishing attacks self-evident.

Beyond that, it adds a positive dimension to inbox control by assuring the delivery of desirable mail, providing you with a new way of judging a message's legitimacy, and providing tools that help to preserve the long-term integrity of the your primary email address. Reflexion's exceptional degree of control is achieved by combining its unique capabilities with traditional defenses, such as Allow Lists, Block Lists, and content filtering, based on the your preferences.

When other systems "run out of gas" in responding to the latest spammer exploits, Reflexion still has more to offer, with Address-on-the-Fly™ (AOTF), Permitted Language and Permitted Country capabilities. Address-on-the-Fly™ gives you an unlimited supply of alternative addresses, all of which resolve to a single inbox, are individually manageable with granular security states, and are automatically managed by the system. The Permitted Language and Country capabilities can block significant additional amounts of spam by ensuring that you never receive mail in languages that you can't speak or from countries outside your organization's geographic location.

Reflexion also provides automated email continuity, by spooling inbound email for 10 days when your local server experiences an outage, and outbound email filtering, to help prevent you from inadvertently spamming your customers, partners and suppliers.

Reflexion Email and Collaboration (REC) provides enterprise-class capability without the requirement of managing a local email server.

Important features include:

As a hosted service, Reflexion Email and Collaboration provides a number of important advantages over traditional on-site solutions:

- No up-front cost to install an email server
- No need for the specialized resources to manage an on-site email server
- Fast and simple deployment
- Updates are provided automatically; the service is always up-to-date
- Malicious content is blocked before reaching the corporate network
- Energy consumption is reduced; hosting is a "green" solution

- **Familiar User Interface:** A familiar and intuitive user interface minimizes the learning-curve to use the solution with proficiency and without any loss of productivity
- **File, Contact and Calendar Sharing:** REC includes robust sharing capabilities and policy controls, with easy-to-use features like drag-and-drop for rescheduling appointments. Shared contacts are available from any connected computer. Online file storage and sharing avoid the need to implement an expensive VPN for remote access. All users are authenticated via SSL.
- **POP3, IMAP and SMTP Support:** Users can access their email in other accounts, and have that mail automatically flow into their Reflexion inbox.
- **10 GB of Storage for Every User:** Every user has a maximum of 10 gigabytes of email storage. Additional storage can be acquired, and users can archive email.
- **Integrated Web Services:** From directly within email, users have one-click access to a variety of business services, for example for travel planning, email marketing, and e-faxing.
- **Centralized Management Console:** A centralized console makes it easy for your internal IT staff or trusted IT advisor to manage users, policies and preferences.

Here is what you'll get when you switch to Reflexion:

Email Hosting - Reflexion Email and Collaboration: Email continues to be the "killer app" for businesses of all sizes, typically providing the principal means of communication, and often serving as an informal repository of a company's intellectual property and operating history. Reflexion Email Hosting provides affordable POP3 and IMAP email hosting, including 10 GB of storage included.

Email Security - Reflexion Total Control: Reflexion Total Control is a hosted email security service that provides inbound and outbound anti-spam, anti-virus, protection against directory harvesting and denial of service attacks, and automatically spools email for 10 days when a mail server is inaccessible.

- On-demand configuration through brandable cloud platform
- Outbound spam and virus detection avoids RBL listing
- Email control panels simplify end-user self-service
- Highly configurable defense-in-depth blocks inbound spam and viruses
- Schedulable quarantine summary
- Unique Address-on-the-Fly® identifies address sharing
- Automatic email spooling

Email Archiving - Reflexion Archiving, Discovery and Recovery (RADAR): RADAR is a hosted email archiving service that operates in conjunction with your existing email server to ensure the protection, preservation and continuous operation of email communication for your business, while providing on-demand email access for users anywhere and anytime. With unlimited storage and unlimited historical data, customers never need to worry about exceeding their archiving quota.

- Automatically stores copies of all inbound/outbound email in secure repository
- Powerful search capabilities through simple user interface
- Rules 17a-3 and 17a-4, 17 CFR Part 240
- Policy-based retention
- Unlimited storage and historical data upload
- Storage and process address
- Recover one or many email messages to Inbox
- Intuitive Webmail client for business continuity

Email Encryption - Reflexion Email Encryption Services: RTCEncrypt protects your customers from sending personally identifiable information (PII) and Protected Health Information (PHI) outbound using plain-text email. Now you can easily ensure privacy and meet both state and federal regulatory compliance requirements with cost effective email encryption.

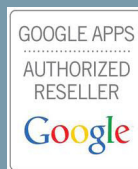

- Automatic policy-based encryption
- Tight integration with both email security and archiving services
- Same capabilities used by the Federal Reserve Board and 1 in 7 U.S. hospitals
- Lexicons to provide encryption for HIPAA, financial services regulations, state privacy laws
- International encryption policies available, e.g. UK NIN
- Ad hoc keyword encryption for greater control
- One-time registration at decryption portal
